

# Towers

*(suitable for all grades - with assistance for younger learners)*

- Use dice and a copy of the towers diagram below
- Throw dice 4 times, fill in the bottom row of the tower and complete the next row by adding the two boxes below each brick

## Adaptations

- Multiply values instead of adding
- Add the first line then subtract the next and so on
- Create a larger tower with more rows
- Have a parent/friend create a partially filled tower as with the picture above
- Use larger-valued or multiple dice to create larger numbers at the start
